

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

5

Listing of Claims:

1. (currently amended) A wireless security and access device, comprising:
a housing;
10 a wireless radio receiver embedded in said housing for receiving notification of an arrived electronic message;
a processor and memory embedded in said housing for processing and storing said notification;
an indicator for displaying said notification ~~of the arrived message~~; and
15 a radio transmitter embedded in said housing for transmitting a preset unique radio signal,
wherein the preset unique radio signal from the wireless security and access device is adapted to interface with a radio receiver of a personal computer preset to receive the unique radio signal.
- 20 2. (original) A device according to claim 1, wherein the personal computer receiver prompts the computer to perform predetermined actions upon receipt of the unique radio signal.
3. (original) A device according to claim 2, wherein the predetermined actions include turning the personal computer on.
25
4. (original) A device according to claim 2, wherein the predetermined actions include opening predetermined programs.
5. (currently amended) A device according to claim 1, further comprising a display coupled
30 to said processor for activation upon receipt of the notification ~~of an arrived message~~.
6. (original) A device according to claim 1, further comprising a manually operable switch for activating said transmitter to transmit the preset unique radio signal.

7. (original) A device according to claim 1, wherein the device is incorporated into a wireless telephone handset.

5 8. (currently amended) A method for providing secure access to electronic messages residing on a personal computer, comprising the steps of:

receiving notification at a remote wireless security and access device that an incoming electronic message has been received at a computer; and

transmitting a preset unique radio signal to the computer,

10 wherein the computer is preset to ~~turn-on-and~~ retrieve the electronic message upon receipt of the preset unique radio signal.

9. (original) A method according to claim 8, wherein the notification received in said receiving step is transmitted by a radio transmitter of the personal computer.

15 10. (original) A method according to claim 8 wherein the notification received in said receiving step is transmitted by a radio transmitter of a service provider.

20 11. (currently amended) A method according to claim 8, wherein the wireless security and access device comprises:

a housing;

a wireless radio receiver embedded in said housing for receiving notification of the electronic message;

25 a processor and memory embedded in said housing for processing and storing said received notification;

an indicator for displaying said notification ~~of the arrived message~~; and

a radio transmitter embedded in said housing for transmitting a preset unique radio signal.

30 12. (original) A method according to claim 8, wherein the personal computer includes a wireless receiver that prompts the computer to perform predetermined actions upon receipt of the unique radio signal.

13. (original) A method according to claim 8, wherein the step of receiving a notification that an incoming message has been received comprises visible or audible activation of the indicator on the wireless security and access device.

5

14. (currently amended) A wireless security and access device, comprising:

a housing;

a wireless receiver embedded in said housing for receiving notification of a voicemail message;

10 a processor and memory embedded in said housing for processing and storing said notification;

an indicator for displaying said notification ~~of the arrived message~~; and

a transmitter embedded in said housing for transmitting a preset unique radio signal,

15 wherein the preset unique radio signal from the wireless security and access device is adapted to interface with a receiver of a telecommunication system preset to receive the unique radio signal.

15. (original) A device according to claim 14, wherein the telecommunication system receiver prompts the system to perform predetermined actions upon receipt of the unique radio
20 signal.

16. (original) A device according to claim 15, wherein the predetermined actions include retrieving the voicemail message.

25 17. (original) A device according to claim 14, wherein the device is incorporated into a wireless telephone handset.

18. (currently amended) A method for providing secure access to voicemail messages residing on a telecommunication system, comprising the steps of:

30 receiving notification at a remote wireless security and access device that an incoming voicemail message has been received at a telecommunication system; and

transmitting a preset unique radio signal to the telecommunication system,
wherein the telecommunication system is preset to ~~turn on and~~ retrieve the
voicemail message upon receipt of the preset unique radio signal.

5 19. (original) A method according to claim 18, wherein the telecommunication system
includes a wireless receiver that prompts the system to perform predetermined actions upon
receipt of the unique radio signal.

10 20. (original) A method according to claim 18, wherein the step of receiving a notification
that an incoming voicemail message has been received comprises visible or audible activation of
the indicator on the wireless security and access device.
